

SAFIRAH BINTI TAJUL ARIFFIN

Full-Stack Developer | System Integration | AI & Cloud Solutions

safirahtajul@gmail.com | +6011-63972186 | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Software Engineering graduate specializing in **full-stack development**, system integration, and **AI-powered applications**. Experienced in building scalable web systems, integrating APIs, and working with cloud-based platforms and databases.

Skilled in developing and **configuring backend services**, performing testing, and supporting **end-to-end system implementation**. Strong interest in solution consulting, client collaboration, and delivering efficient, scalable enterprise systems.

KEY SKILLS AND STRENGTHS

Programming Languages: Python, Java, JavaScript, PHP, SQL, HTML/CSS

Frontend: React.js, Vue.js (TypeScript), Bootstrap

Backend: FastAPI, Laravel

Integration & APIs: REST APIs, API Integration, Web Services, JSON

Databases: PostgreSQL, MySQL, Firestore, BigQuery

AI & Data: Generative AI (Google Gemini), RAG Architecture, BigQuery, Firestore, PostgreSQL, Supabase

Tools & Practices: Git, GitHub, Insomnia (API Testing), Figma, Jira, Trello, Agile/Scrum

Other: Technical Documentation, Requirement Understanding, System Testing

WORK EXPERIENCE

SAP Specialist Applications

DKSH – Malaysia | July 2026 – Present

- Joining the SAP Applications team to support SAP application design, development, and implementation, with a focus on SAP MM (Materials Management) module support and architecture alignment.
- Scope includes gathering and analyzing business requirements, developing SAP solution designs, and supporting issue resolution to ensure high service levels.

IT PMO (Project Management Office)

Vista Kencana Sdn. Bhd. – Kuala Lumpur (Contract) | May 2026 – June 2026

- Supported project documentation and administrative activities for a project implemented at DBKL (Kuala Lumpur City Hall).
- Assisted in meeting coordination, follow-ups, and documentation of action items to support project tracking and delivery.

Full Stack Developer Internship

Lestari Alam Sekitar – Seremban | September 2025 – January 2026

- Engineered and integrated 10+ REST APIs for backend-AI communication, improving system reliability and reducing integration errors by ~30%.
- Performed API testing and validation using Insomnia to ensure system functionality and smooth deployment.

- Developed modular Vue.js components, improving UI responsiveness across devices by ~25%.
- Supported technical documentation and system workflows, improving clarity for team collaboration and implementation.
- Assisted in cross-functional product demos, enhancing communication between technical and non-technical stakeholders.

Programmer

KA Digital – Cyberjaya | Jun 2022 – Jan 2023

- Customized and optimized WordPress websites using HTML, CSS, and JavaScript, improving performance by ~35%.
- Translated client requirements into UI components and functional features, delivering 5+ projects successfully.
- Worked closely with clients to understand needs and implement tailored web solutions.

PROJECT

AI-Powered Carbon Footprint Calculator for Construction Materials

Industry Project | Jan 2026 – Mar 2026 | React.js, FastAPI, PostgreSQL, Firestore, OCR/NLP, Google Gemini (RAG), Cloud Run

- Designed and implemented an AI-powered OCR and NLP pipeline to extract structured data from PDFs, reducing manual processing time by ~90%.
- Integrated backend services and AI modules through APIs to enable seamless data processing and system communication.
- Developed a recommendation module to support decision-making, improving system usability and analytical output.
- **Achieved Top 2 placement (2nd place) out of 8 teams** in the final project evaluation.

PureFarm Management System

Focus: Full-Stack Web Development | Agriculture Tech | Productivity Tools

- Designed a centralized system to manage farm operations, improving workflow efficiency by ~40%.
- Built relational database schemas handling 1,000+ records for real-time monitoring.
- Developed dashboards for data visualization, improving operational decision-making.

Simulation Forest Tree

Focus: Algorithm Design | Ecosystem Modelling | Data Visualization

Tech Used: Java, PHP, JavaScript, HTML/CSS + Bootstrap, MySQL

- Developed rule-based algorithms in Java to simulate ecosystem growth using 1,000+ data points.
- Built real-time dashboards to visualize environmental data and improve analysis efficiency by ~30%.

EDUCATIONAL BACKGROUND

Gamuda AI Academy

AI & Full-Stack Development Program | January 2026 – March 2026

- Selected for an industry-led AI engineering program, developed 6+ full-stack modules using React, FastAPI, PostgreSQL, and Google Cloud services, strengthening production-grade system architecture capabilities.
- Implemented RAG-based AI workflows using Google Gemini and structured sustainability datasets, improving contextual accuracy of AI-generated carbon analysis outputs.

- Deployed scalable backend services using Cloud Run and Firestore, reducing manual deployment complexity and ensuring reliable cloud-based processing pipelines.

Universiti Of Kuala Lumpur Bachelor of IT (Hons.) - Software Engineering, Feb 2023 – Jan 2026

Kolej Universiti Poly Tech Mara Diploma in Computer Science, Jun 2019 – Oct 2021, CGPA: 3.88

CERTIFICATIONS

Google Project Management Professional Certificate	January 2025
Microsoft Azure AI Fundamentals (AI-900)	August 2025
Google UX Design Professional Certificate	October 2025
Google Business Intelligence Certificate	November 2025

EXTRA-CURRICULAR ACTIVITIES

Participant | Akar & #AIForMYFuture Bootcamp (Microsoft x PayNet)

Paynet | August 2025

- Participated in a national bootcamp focused on **AI, digital transformation**, and **fintech innovations**.
- Gained foundational skills in **cloud computing and AI applications**, aligned with current tech trends.
- Joined the Ideathon, where my team presented “**AI Bias in Hiring** – Ethical and Technical Dilemma” and proposed our solution: **FairHire Workflow**, an AI-powered hiring system designed to minimize bias while keeping human oversight at the core.

Usherer | International Conference & Exhibition Professionals (iCEP)

Energy Asia 2025 | June 2025

- Volunteered as an usherer at Energy Asia 2025, a major international event focused on **sustainability, innovation, and the future of energy** in Asia.
- Responsibilities included guiding and assisting visitors, helping with event logistics, and ensuring smooth flow in designated areas.
- Gained hands-on experience in event operations, improved communication and teamwork skills, and developed a deeper understanding of global collaboration efforts in the energy sector.

Project Manager | Algorithm Adventure – Codetopia

Universiti Kuala Lumpur | March 2024

- Led the development and project coordination of **Algorithm Adventure**, an educational board game created under Codetopia Sdn. Bhd. as part of Universiti Kuala Lumpur’s “Board Games Genius” competition, blending strategy, technology, and education.
- As Project Manager, responsible for planning the game structure, designing game mechanics, assigning team tasks, and ensuring project milestones were met on time.
